

Project Design Phase-II

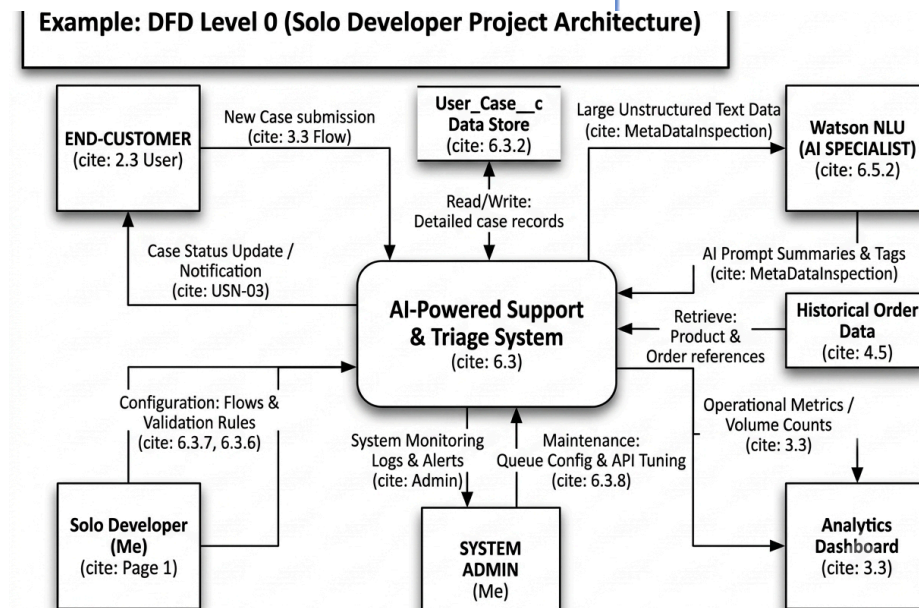

Data Flow Diagram & User Stories

Date	16 July 2026
SID	SWUID2026198226
Project Name	AI-Powered Customer Support & Service Automation.
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example:

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Case Creation	USN-1	As a customer, I want to submit support inquiries using unstructured text so that I can report issues without manually filling out long forms.	System successfully receives raw text and populates a new User Case record linking relevant Customer details.	High	Sprint-1
Support Agent	Automated Summaries	USN-2	As a support agent, I want an automated summary generated for incoming cases so that I can understand the context quickly without reading long logs.	The MetaDataInspection prompt template populates a clean, structured text summary directly in the User Case layout.	High	Sprint-1
Support Agent	Sentiment Analysis	USN-3	As a support agent, I want the system to flag negative customer sentiment automatically so that I can prioritize critical escalations.	The AI model evaluates raw text and sets a "Sentiment Status" field (e.g., Escalated, Neutral, Positive) on the User Case object.	Medium	Sprint-1
Administrator	Intelligent Routing	USN-4	As an administrator, I want Record-Triggered Flows to route cases based on case criteria so that manual assignment overhead is eliminated.	Ingested records matching defined priority queues are instantly updated with the correct owner assignment.	High	Sprint-2
Customer	Autonomous Support	USN-5	As a customer, I want an Agentforce assistant to handle basic inquiries (like order status matching the Order object) so that I get immediate resolution.	Agentforce resolves standard user queries using data from the Order and Product objects without agent intervention.	Medium	Sprint-2
